

Amendment to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (previously presented): A method for conditioning hair comprising applying to the hair a hair oil consisting essentially of:

- (i) from 60% to 80%, by weight based on total weight, of a first oily component selected from the group consisting of coconut oil, sunflower oil, almond oil and mixtures thereof; and
- (ii) from 20% to 40%, by weight based on total weight, of a second oily component which is light mineral oil having a viscosity at 25 to 30°C of from 0.0001 to 0.5 Pa.s.

Claims 2-6 (canceled)

Claim 7 (previously presented): A method according to claim 1, wherein the hair oil is in an anhydrous form.

Claims 8- 12 (canceled)

Claim 13 (previously presented): A method for conditioning hair comprising applying to the hair a hair oil consisting essentially of :

- (i) from 60% to 80%, by weight based on total weight, of a first oily component which is one or more glyceride fatty esters, and
- (ii) from 20% to 40%, by weight based on total weight, of a second oily component which is one or more hydrocarbon oils each with a viscosity at 25

to 30°C of from 0.0001 to 0.5 Pa.s and being selected from the group consisting of a light mineral oil, straight chain hydrocarbon oils containing from 6 to 16 carbon atoms, branched chain hydrocarbon oils containing from 6 to 20 carbon atoms and blends thereof, with the proviso that, if glycerine is present in the hair oil, it is present at a level of up to about 5% by weight of the hair oil.

Claim 14 (new): A method as described in claim 1 wherein said light mineral oil has a viscosity at 25 to 30°C of from 0.001 to 0.05 Pa.s.

Claim 15 (new): A method as described in claim 13 wherein the viscosity at 25 to 30°C of said hydrocarbon oils is from 0.001 to 0.05 Pa.s.

Claim 16 (new): A method as described in claim 1 wherein said light mineral oil has a viscosity at 25 to 30°C of from 0.001 to 0.02 Pa.s.

Claim 17 (new): A method as described in claim 13 wherein the viscosity at 25 to 30°C of said hydrocarbon oils is from 0.001 to 0.05 Pa.s.
